

### **Technical Bulletin #34**

#### Termination Details

- Key Resin flooring systems with leading edge terminations at embedded steel plates and trench drains should include installation of a “keyed in” nosing detail. The nose area should be built from the flooring material or a compatible resinous material.
- Key Resin flooring systems with leading edge terminations at bare concrete or other types of floor finishes require a sawcut and “keyed in” nosing detail.
- Key Resin flooring systems with terminations at circular floor drains require a “keyed in” nosing detail. The nose area should be built from the flooring material or a compatible resinous material. The drain must be set at the proper elevation.
- Cove base height, cant base height, radius thickness, and terminations may require coordination with the facility owner or architect/engineer.
- Refer to Key Resin Flooring Detail Drawings Guide for illustrations.
