Key Resin Company Terrazzo Flooring contributes toward USGBC LEED® credits.

In today's building market, architects, designers and building owners want solutions that offer superior performance, have desirable aesthetic appeal and are environmentally responsible. Terrazzo embodies all of these attributes and also contributes towards earning points for LEED® project certification.

We set the standard for epoxy terrazzo systems by providing materials that exhibit little to no off-gassing over the life of the cured floor. In addition, the non-porous finish inhibits microbial growth which helps to maintain a mold-free environment with improved indoor air quality.

We are a proud member of the U.S. Green Building Council and adhere to its LEED Standards.

For more information on Key Resin Terrazzo's transparency and sustainability features, scan the code below.
